

DRYAS - Confronting the Physical Prior with the Trees

Per (site, event) response vs prior ground motion

● detected ($z \geq 1.645$) ● not detected

Empirical calibration of the tree-response prior

● Observed detection rate (size ~ n pairs)
-- 003 prior ($x_0=2.00$, $k=5.5$)
— fitted ($x_0=4.50$, $k=0.6$), AUC=0.46
